

SessionViewer

About

woanware is the name for a set of tools and applications I have written. The majority of the tools/applications are related to networking, network security, application security or digital forensic tasks.

The author has spent 6 years as a commercial programmer, over 5 years performing security testing (network infrastructure and applications) and then over a year of digital forensics.

Introduction

History

v1.0.2

- Removed awesomium for HTML display

v1.0.1

- Modified the database creation to prevent file locking, which can stop the creation of subsequent databases during a continuous run of the application
- Moved the database deletion/creation to the Parser object e.g. background thread
- Moved the SQL CE database access from PetaPoco to NPoco
- Update awesomium to v1.7.0.5
- Modified the key presses so that the selected session is always in view
- Parses out the Host header for display on main list

v1.0.0

- Added Size column to list view
- Loading of session data now occurs on a background thread

v0.0.1

- Initial release
